

News from the office of:

Robert E Smith DDS

After the long winter, it's wonderful to finally welcome spring!

Throughout the year, the number one goal in our office is to put a bright, healthy smile on your face. Whether you're looking to maintain your healthy smile or brighten it up with cosmetic options, we'd be happy to give you all the information you need in order to make informed and confident dental decisions.

We invite you to read our latest newsletter and to call us if you have any questions about any of the topics discussed. Please feel free to pass it along to any friends or family members who may find it interesting too.

We look forward to seeing your smile again soon!

All the best,

Robert E Smith DDS

Ocean Dental Group

Secrets of a Super Smile

Why is it that some people have a naturally perfect smile, while the rest of us don't have to look too far to find fault with our tooth color, shape or alignment? Look again ... you may find that the only difference between "them" and "us" is that they have taken advantage of some of the wonderful new cosmetic dentistry options available today.

Cosmetic dentistry used to be reserved for the rich and famous, but today's easy and affordable techniques now allow anyone with the desire for a "movie star smile" to treat themselves to their choice of cosmetic improvements.

One of the easiest and most effective ways to brighten your smile is to use professional whitening. While there is a dizzying selection of drugstore tooth whitening options available, they are no substitute for the professional results of dental office treatment. Let us help you make the best decision for your individual situation.

If your teeth are chipped, cracked, worn or uneven, be assured that today's dentistry has the solution that's right for you, whether it's with bonding of composite resins, porcelain veneers or crowns.

If it isn't the condition of a tooth, but rather the absence of

one or more that's bothering you, you'll want to find out about all the advances in dental implants.

A dental implant literally replaces a missing tooth by installing an artificial tooth root where the missing root was. A new tooth is then manufactured and anchored to the root to result in a completely natural look and feel. Dental implants are the best option to take care of not only the cosmetic desire to fill a gap, but also the dental necessity of ensuring that the position of the remaining teeth is not adversely affected by the space left by any missing teeth.

We have the solution to whatever smile improvement you're looking for. Give us a call to book an appointment for your "star" treatment today!
